

## Data Sheet

### EASYFERM FOOD

The EASYFERM FOOD sensors are designed for applications in pharmaceutical industry, biotechnology and food and beverages industry. The FOODLYTE reference electrolyte is intended and foreseen to get into contact with food. It does not harm microorganisms in fermenters. The electrolyte is pre-pressurized to prevent the diffusion of sample into the sensor. The EVEREF-F reference cartridge ensures that the FOODLYTE reference electrolyte remains free of silver and precipitation. EASYFERM FOOD withstands steam sterilization, autoclavation and cleaning in place.
