

# T9 Calibration Tank

The Insatech T9 Calibration Tank is the perfect companion for your Insacal® or Insacal® mk. II master meter. The calibration tank has a built-in circulation pump, so you can easily set up and effectively carry out precise conductivity calibrations of several sensors at multiple points.

The standard T9 comes with a 1½", 2" and 2½" clamp connection, but can be changed to fit your needs. T9 is delivered with 2 x 1 m tubes with mini-clamps. The tubes have been specifically selected to ensure that they do not influence the calibration, even when performed at the lowest conductivity ranges.
